■ ABOUT TEAMBEES

Technology talent and capability delivery, under one roof

2021

Established

30+

Workflows automated

78%

Avg processing-time reduction

4

Markets

We help enterprise and GCC technology teams put AI to work — agentic workflows, intelligent automation and AI-driven quality engineering, on the platforms they already run — delivered by validated specialists embedded in their workflows and governance.

Manufacturing

Healthcare & Life Sciences

Automotive

BFSI

Technology

Industrial & ER&D

■ TEAMBEES JOURNEY & GLOBAL PRESENCE

From contingent workforce management to an AI-enabled practice

■ CLIENT PORTFOLIO

Trusted across enterprise technology environments

Key engagements

+ many more

ENTERPRISE ENGAGEMENTS • DOMAIN-ALIGNED TALENT • FLEXIBLE WORKFORCE MODELS

■ THE CASE FOR PRODUCTION AI

Your AI ambition is ready. Your production path may not be.

Three gaps keep AI programmes stuck between the demo and daily use.

01

THE TRUST GAP

Generic AI assistants hallucinate, leak data across roles and fail compliance review.

HOW WE CLOSE IT

Governed agents — RBAC, an audit trail on every model call, human-in-the-loop gates and evals.

02

THE INTEGRATION GAP

AI that cannot act inside CRM, ERP or ITSM systems stays a demo.

HOW WE CLOSE IT

Agent-driven workflows orchestrated across ServiceNow, Salesforce, SAP, NetSuite and Oracle.

03

THE SKILLS GAP

Agentic, RAG and LLMOps skills rarely exist in-house when the roadmap needs them.

HOW WE CLOSE IT

Validated AI specialists and capability pods, embedded in your team, tools and governance.

TeamBees closes the gaps with governed AI builds and validated AI specialists.

■ OUR SERVICES OVERVIEW

Four service lines. One technology partner.

01

DIGITAL PRODUCT ENGINEERING & AI

- Quality Assurance and Testing
- AI & agentic automation
- B2C & B2B App Development
- Cloud Native Development

02

ENTERPRISE SOLUTIONS

- **ServiceNow** — HRSD, ITSM, ITAM, ITOM, CMDB, CSDM, GRC, workflow automation
- Salesforce
- SAP

03

DATA & ANALYTICS

- Data Engineering Pipelines
- BI & Visualization
- Advanced Analytics / AI

04

HIRING SOLUTIONS

- Project based / Contractual
- Permanent
- **Energy trading & CTRM specialists** — Endur, Aspect, Allegro, RightAngle

Deploy as staff augmentation, capability pods or a hybrid model under consistent governance.

■ AI CAPABILITIES & SOLUTIONS

Build with agents. Automate with intelligence. Scale with confidence.

KEY CAPABILITIES

01

**AGENTIC WORKFLOW
AUTOMATION**

Agent-driven workflows with LLM reasoning, smart routing, and RAG pipelines

02

**INTELLIGENT PROCESS
AUTOMATION**

Automates documents, approvals, and integrations — cuts manual effort up to 78%

03

**ENTERPRISE SYSTEM
INTEGRATION**

API orchestration across Salesforce, NetSuite, SAP, Oracle, and payment systems

04

**GOVERNED & COMPLIANT
EXECUTION**

Audit trails, RBAC, encryption, and high-availability SLAs

AI-DRIVEN WORKFLOW

01 • DATA INGESTION & SIGNALS

PDFs, invoices, forms, APIs, webhooks

02 • AI REASONING & VALIDATION

OCR, LLM analysis, KYC/compliance checks, task routing

03 • AUTOMATED EXECUTION

ERP/CRM sync, approval routing, payment processing

04 • MONITORING & OPTIMIZATION

Dashboards, SLAs, audit trails, continuous tuning

■ AUTOMATION PLATFORMS

Enterprise-grade platforms for intelligent automation at scale

78%

Average processing time reduction

30+

Workflows automated across industries

99.9%

Uptime SLA on cloud infrastructure

01

WORKFLOW ORCHESTRATION

- n8n, Make.com, UiPath workflows
- Event-driven triggers & webhooks
- Visual pipeline builder with LLM agents
- Human-in-the-loop approval gates

02

DATA & INTEGRATION LAYER

- Supabase & PostgreSQL
- Salesforce, NetSuite, SAP, Oracle connectors
- Utility & government portal automation
- ETL pipelines with AI validation

03

CLOUD & INFRASTRUCTURE

- Cloud-native microservices (Node.js, Python, .NET)
- API orchestration & real-time sync
- CI/CD pipelines with automated testing

■ AI & AGENT FRAMEWORKS

Technology foundation powering intelligent automation orchestration

FRAMEWORK STACK

LLM & FOUNDATION MODELS

GPT-4 • Claude • Gemini • LLaMA

AGENT ORCHESTRATION

LangChain • RAG Pipelines • Custom Agents

AUTOMATION PLATFORM

n8n • Make.com • UiPath • Zapier • Power Automate

CLOUD & BACKEND RUNTIME

Supabase • PostgreSQL • Node.js • Python • .NET

AGENT CAPABILITIES

- ✓ AI agent design & orchestration for multi-step workflows
- ✓ LLM reasoning pipelines with context-aware decision-making
- ✓ RAG pipelines for domain-specific knowledge retrieval
- ✓ Intelligent task routing across enterprise systems
- ✓ Document processing automation (OCR + AI validation)
- ✓ Governed execution with audit trails and role-based access

■ AI TECHNICAL CAPABILITIES

Six capability areas, proven in the builds that follow

01

PROVEN IN Divo · HRMS

AGENTIC ARCHITECTURE

Supervisor / worker & orchestrator / subagent patterns
• Typed tool-calling schemas (JSON-locked) • Parallel agents with deterministic merge • Domain-scoped specialist agents • Checkpoint & resume • Idempotent workflows

02

PROVEN IN Divo · Testbot

MEMORY & RETRIEVAL

Episodic, semantic & procedural memory • Hybrid search (BM25 + dense) • Embeddings & reranking • Chunking & context-window management • Long-context retrieval

03

PROVEN IN Divo · Testbot

MODEL & PROMPT ENGINEERING

System prompt design • Chain-of-thought & reasoning models • Structured output • Token efficiency • Streaming inference • Cost routing across models

04

PROVEN IN Divo · HRMS

RELIABILITY & GOVERNANCE

Hallucination detection & tool-call interception • Loop detection & circuit breakers • Human-in-the-loop gates • RBAC & audit trail on every model call • PII redaction • LLM observability, LLMOps & AI gateway • Prompt versioning

05

PROVEN IN Divo · Testbot

EVALUATION & QUALITY

Evals frameworks (LangSmith, Braintrust) • Mutation scoring • Planted-bug validation • Self-healing AI-generated tests • Benchmarking & red-teaming

06

PROVEN IN Testbot

PLATFORM & CUSTOMIZATION

Model Context Protocol (MCP) • Computer-use & multimodal agents • On-device / edge inference (ONNX) • Fine-tuning (LoRA / QLoRA) & RLHF • Domain-adapted models • Synthetic data generation

■ AI ON SERVICENOW & ENTERPRISE PLATFORMS

Putting AI to work inside the platforms you already run

ServiceNow delivery depth, combined with our agentic AI and automation capabilities.

SERVICENOW DELIVERY DEPTH

MODULES

ITSM • HRSD • CSM • ITOM • CMDB & CSDM • ITAM / HAM • GRC / IRM

PLATFORM

Flow Designer • IntegrationHub • UI Builder & Workspaces • Service Portal • ATF • Performance Analytics

INTEGRATIONS

REST / SOAP • MID Server • OAuth 2.0 & mTLS • Import Sets & Transform Maps

DELIVERY

Upgrades • Update Sets & CI/CD • UAT • Production support & root-cause fixes

WHERE AI FITS ON SERVICENOW

01

INTELLIGENT TRIAGE & ROUTING

AI classifies incidents, cases and HR requests and routes them to the right team — with RBAC and a full audit trail.

02

KNOWLEDGE ANSWERS WITH RAG

Grounded answers from knowledge bases and policy documents for employee and agent self-service.

03

DOCUMENT INTAKE TO WORKFLOW

OCR + AI validation turns forms, invoices and emails into catalog requests and records.

04

AI-DRIVEN TEST AUTOMATION

AI-generated, self-healing regression suites alongside ATF for upgrades and releases.

BEYOND SERVICENOW • Agent-driven API orchestration across Salesforce, SAP, NetSuite and Oracle

■ DIGITAL PRODUCT ENGINEERING & AI — WHAT WE OFFER

End-to-end software development across web, mobile and enterprise platforms

Tailored solutions for OEMs and service providers.

KEY CAPABILITIES

- 01 Quality Assurance Excellence**
End-to-end testing
- 02 AI & Agentic Automation**
LLM workflows & intelligent automation
- 03 B2C & B2B App Development**
Web & mobile
- 04 Cross-Platform Development**
iOS, Android, Web
- 05 Cloud Native Development**
Microservices architecture

TECHNOLOGY STACK

01 PROGRAMMING LANGUAGES

Python • C++ • Java • Kotlin • Swift • SwiftUI

02 FRONTEND FRAMEWORKS

AngularJS • ReactJS • Vue.js • Qt

03 BACKEND & FULL-STACK

Node.js • .NET • WPF

04 MODERN TECHNOLOGIES

Big Data • Microservices • DevOps • MLOps • GenAI

05 MOBILE DEVELOPMENT

React Native • Flutter • iOS Native • Android Native

06 AI & AGENT FRAMEWORKS

LangChain • n8n • RAG • GPT-4 • Claude • LLaMA

■ COMPREHENSIVE QUALITY ASSURANCE

Excellence through rigorous validation and specialized testing

01

CORE TESTING SERVICES & VALIDATION

- **End-to-End Validation:** Verification of user flows and requirements integrity across the entire application lifecycle.
- **Performance & Load Testing:** High-concurrency simulation to validate system stability under peak loads.
- **API Layer Validation:** Ensuring backend logic integrity and seamless data exchange between services.
- **Automated Regression:** Comprehensive coverage ensuring stability across frequent release cycles.

02

SPECIALIZED TESTING

- **Security (DAST / SAST):** Vulnerability scanning and security assessments to protect critical assets.
- **Accessibility (WCAG 2.1):** Ensuring compliance with global accessibility standards for inclusive design.
- **User Acceptance Testing (UAT):** Structured coordination and management of UAT phases for stakeholder sign-off.
- **Penetration Testing:** Proactive identification of security weaknesses through simulated cyberattacks.

TOOLS & FRAMEWORKS

Automation

Selenium • Cypress • Appium •
Playwright

Performance

JMeter • LoadRunner • Gatling • K6

API & Security

Postman • Rest Assured • OWASP ZAP •
Burp Suite

Management

JIRA • TestRail • Zephyr • Azure DevOps

■ CASE STUDIES

From problem to measurable outcome

01

Divo

Multi-agent AI for Finance + CRM

SLIDE 15

02

HRMS

AI workforce platform across 10 domains and 5 markets

SLIDE 16

03

Testbot

AI-generated, self-healing UI tests for desktop apps

SLIDE 17

CASE STUDIES

Challenge.
Approach.
How it works.

Capabilities used.

■ CASE STUDY 01 • DIVO

Multi-agent AI for Finance + CRM

ENTERPRISE

MULTI-AGENT

LANGGRAPH

01

THE CHALLENGE

Sales and finance teams worked in parallel in Zoho CRM and Zoho Books. Queries crossed domains, and generic chatbots hallucinated and leaked data across roles.

02

OUR APPROACH

- Episodic and semantic memory scoped per user
- Hallucinated tool calls intercepted by schema validation
- Evals, mutation scoring and planted-bug checks pre-release

03

HOW IT WORKS

Router agent

Classifies intent

Domain agent

CRM · RAG · Finance

RBAC filter

Hard reject on role mismatch

Typed JSON output

Fallback broadens low-confidence queries

04

OUTCOMES

40%

Faster task execution

45–60 min

Saved per user / day

80%

Faster bulk operations

40%

Fewer handling errors

CAPABILITIES USED • 01 Agentic Architecture • 02 Memory & Retrieval • 04 Reliability & Governance • 05 Evaluation & Quality

■ CASE STUDY 02 • HRMS

AI workforce platform across 10 domains and 5 markets

ENTERPRISE

10 DOMAINS

5 MARKETS

01

THE CHALLENGE

Recruiting, HR, compliance and ops sat in separate tools across five markets, each with its own employment law. Generic AI assistants failed every compliance review.

02

OUR APPROACH

- Ten specialist AI agents, each scoped to its function and jurisdiction
- Human review gate on every employment-consequential output
- Audit log on every model call; tenant-isolated client data

03

10 SPECIALIST AI DOMAINS

01 Recruiting agent

02 Sourcing agent

03 Screening agent

04 Compliance agent

05 Onboarding agent

06 HR operations

07 Payroll review

08 Performance

09 Learning & dev

10 Workforce analytics

04

OUTCOMES

60%

Faster hiring cycles

50%

Reduction in time-to-fill

30%

Lower cost-per-hire

2 hrs

Saved per recruiter / day

CAPABILITIES USED • 01 Agentic Architecture • 04 Reliability & Governance

■ CASE STUDY 03 • TESTBOT

AI-generated, self-healing UI tests for desktop apps

DESKTOP-NATIVE

LOCAL-FIRST

MCP

01

THE CHALLENGE

Desktop teams shipping QML/Qt and Windows apps had no autonomous testing: cloud platforms refused native binaries, and regressions kept escaping to release.

02

OUR APPROACH

- Local-first MCP server in Claude Code — no data leaves the machine
- Tests generated from full source, not a lossy summary
- Committed to git with stable IDs; self-heal on UI churn

03

PIPELINE

01 Discovery

02 Plan

03 Generate

04 Run

05 Heal

06 Score

~40 MCP tools the agent calls inside Claude Code

04

OUTCOMES

60–85%

Faster UI test
authoring

3–5 hrs

Saved per QA
engineer / day

40–60%

Faster time-to-green

0

Cloud egress or credit
meters

CAPABILITIES USED • 02 Memory & Retrieval • 05 Evaluation & Quality • 06 Platform & Customization
